

The Desk Doctor

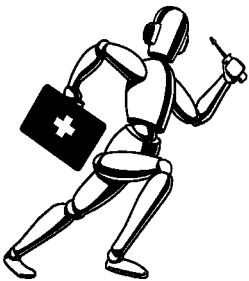

ZX Card

True Timecode & 9 Pin Transport Control from SSL Computers

This exciting new card for SSL E and G computers enables timecode transport control. The development by Desk Doctor enables instant locate for timecode operated transports and Sony 9 Pin Protocols. Locked to internal or studio reference, the ZX card has been designed to take advantage of studio non-linear transport capabilities including high speed searching and random access. The timecode outputs have been developed such that computer based recording systems will not lag behind or require buffering for instant play out from desired locations.

Add the CX-16 controller option for Midi fader and mute control direct from the console.

The Desk Doctor

No Compromises
